Understanding the Impact of Trauma on the Brain

For all early years providers, early years centre staff, health, allied health, education and disability professionals.

- Join us for a fascinating insight into how trauma affects the brain.
- Do you work with children or young adults who have experienced trauma?
- Does their behaviour concern or worry you?
- Do you want to feel better equipped to manage them in your setting?
- Do you want some strategies for making them feel safe when they are with you?

Workshop will introduce three main types of trauma and how they impact on child brain development. Participants will learn how this can effect learning, behaviour and self-regulation as a child and into adulthood. This 3 hour introductory module is essential for anyone working with children or young adults who have experienced trauma.

Thursday 29th June 9.00AM - 12.30 tickets are \$97.00 - light refreshments provided
